

`std::exception`

```
graph BT; original::indexError --> std::exception
```

The diagram illustrates an inheritance relationship between two C++ exception classes. At the bottom is a gray box representing the base class, `original::indexError`. It has three horizontal sections, with the top one containing the class name. Above it is a white box representing the derived class, `std::exception`. It also has three horizontal sections, with the top one containing the class name. A blue arrow points from the top of the `original::indexError` box to the bottom of the `std::exception` box, indicating that `std::exception` inherits from `original::indexError`.

`original::indexError`
